Project Guide by:
Prof. Nainesh Gathiyawala

Acknowledgement

The success and outcome of this project required a lot of guidance and assistance from many people, and we are extremely fortunate to have gotten this all along with the completion of our project work. Whatever we have done is only due to such guidance and assistance.

We would not forget to thank Principal Dr. Aditi Bhatt, IQAC coordinator and trust representative Dr. Vaibhav Desai, IT In-charge Dr. Vimal Vaiwala, Head of BCA Department Prof. Nainesh Gathiyawala and Project guide ***Prof. Nainesh Gathiyawala*** and all other assistant professors, who took a keen interest in our project work and guided us all along till the completion of our project work by providing all the necessary information for developing a good system.We are extremely grateful to **him/her** for providing such nice support and guidance, though **he/she** had a busy schedule managing the college dealings.

We are thankful and fortunate enough to have gotten support and guidance from all the teaching staff in the Bachelor of Computer Application Department, which helped us successfully complete our project work. Also, we would like to extend our sincere regards to all the non-teaching staff of the Bachelor of Computer Application Department for their timely support.

CHAPTER - 1
INTRODUCTION

1.1 Project description

1.2 Project Profile

Rent Your Product with social media C2C Website Welcome to Rental Kings, the premier online platform designed to simplify the process of renting products while fostering a vibrant community of users. Whether you're looking to rent out your own items or find products to rent, Rental Kings is your go-to marketplace for all things rental.

The Rental Kings project is a platform that facilitates a peer-to-peer (C2C) marketplace where users can rent products and services directly from one another.

This project aims to offer an easy, secure, and community-driven platform that allows individuals to rent out their unused items and find items they need for temporary use.

The platform will also integrate social media features to enhance trust, build a sense of community, and allow users to share their listings with a broader audience.

Our Mission:

At Rental Kings, we aim to make product rental easier, safer, and more convenient by providing a reliable C2C (consumer-to-consumer) platform. Our goal is to give users the opportunity to rent anything from everyday items to high-end products, all while connecting with others in a social, community-driven way.

❖ Key Features:

Product Rentals: Rent items that you need temporarily. Whether it's electronics, furniture, cameras, tools, or anything else, Rental Kings connects you to people in your local area.

Rent Your Products: Got something you're not using all the time? Rent it out to others and make some extra cash. We make it easy to list your products and manage rentals securely.

Social Media Integration: Rental Kings seamlessly integrates with social media, allowing you to share your rental listings with your followers and create a sense of trust through social proof.

C2C Platform: We enable peer-to-peer rentals, so you can rent directly from fellow users or rent out your own items. It's a community-driven way to access and share products.

Safety and Trust: We prioritize security with verified user profiles, reviews, and ratings to ensure smooth transactions and positive experiences.

Customizable Rental Periods: Rent products for any duration, whether it's a few hours, days, weeks, or months, depending on what you need.

❖ Why Choose Rental Kings?

Convenience: Rent anything you need without the long-term commitment.
Community-Driven: Connect with users locally and globally.
Extra Income: Rent out your own items and earn passive income.
Environmental Impact: Renting helps reduce waste by encouraging reusability.

1.1 Project Description

A "Retail King" project typically refers to an ambitious business initiative aimed at establishing a dominant position within the retail market, often by implementing innovative strategies to optimize customer experience, inventory management, pricing, and market reach, essentially aiming to become the leading retailer in a specific region or niche, much like how "King" implies a top position of power and influence.

1.2 Project Profile

Project Title	RENTAL KINGS
Project Defination	Rental Kings is a peer-to-peer (C2C) online platform that connects individuals who want to rent out their products with those looking to rent items for short-term use. It enables users to list, search, and rent a variety of products such as electronics, furniture, tools, vehicles, and event equipment.
Front End	HTML, CSS, Javascript, Bootstrap, JQuery
Back End Tools	Python +Django
Project Category	Web based application
Project Associates	5
Duration	3 Months
Internal Project Guide	Prof.Nainesh Gathiyawala
Submitted By	Dency R. Jariwala Tisa M.vesuwala Divyanshu N. Patel Parthkumar P. Surati Harshil H. Kothari
Submitted to	SDJ International College

CHAPTER - 2
ENVIRONMENT DESCRIPTION

2.1 Hardware and Software Requirements

2.2 Technologies Used

2.1 Hardware and Software Requirement:

The Efficient Hardware and Software Configuration Requires Running the System Is as Suggest Below. The Configuration Suggested Is for Better Performance. Same Functionality or Higher Configuration Will Always Better.

SERVER

Software	
Operating System	Windows
Browser	Google Chrome, Mozilla Firefox, Internet Explorer.
Database	Sqlite
Microprocessor	Any but latest is good for performance
Memory	4 GB
Hard Disk Space	Minimum 1 GB

CLIENT

Operating System	Linux, Windows XP, Windows 2007, Windows Vista, Windows 2008, Windows 10
Browser	Google Chrome, Mozilla Firefox, Internet Explorer.
Database	Sqlite
Microprocessor	Any but latest is good for performance
Memory	Minimum 512 MB
Hard Disk Space	Minimum 1 GB

2.2 Technology Used:

Language: Python

Database: Sqlite

Framework: Django

CHAPTER - 3
SYSTEM ANALYSIS AND PLANNING

3.1 Existing System and its Drawbacks

3.2 Feasibility Study

3.3 Requirement Gathering and Analysis

System Analysis is the process of studying and defining what a system needs to do, its components, and how it interacts with users and other systems. System Planning, on the other hand, focuses on how to design, organize, and implement these requirements into a functioning system. Both steps are vital to ensure that the project meets its goals and user expectations.

❖ Key Goals of System Analysis and Planning

1. **Database and Architecture Design:** Design the underlying data structure and system architecture, ensuring the platform can handle a high volume of users and transactions, maintain consistency, and ensure security.
2. **Design the User Interface and Experience:** Create a user-friendly, intuitive interface for both web and mobile users. This includes designing screens for searching items, listing items, booking rentals, managing payments, and providing feedback.
3. **Plan for Scalability, Security, and Testing:** Address how the system will grow over time, how it will handle sensitive data securely, and how the functionality will be tested to ensure quality.

3. 1 Existing system and it’s drowbacks

In the context of the **C2C Rental Kings Project** built in Python, it's essential to analyze any **existing systems** (if any) or conceptualize a typical **current state of similar platforms** in the market.

By identifying the limitations or drawbacks in these systems, we can focus on improving the user experience, efficiency, and scalability of the **Rental Kings** platform.

These platforms usually include the following key features:

- User Registration and Authentication
- Item Listings with Photos, Descriptions, and Availability

- Search Mechanisms
- Booking and Payments
- Ratings and Reviews
- Admin Management (for platform oversight)

While the **C2C Rental Kings Project** in Python aims to create a user-friendly and secure platform for renting items, there are inherent challenges and drawbacks that come with building such a system. These limitations may impact the overall user experience, performance, scalability, and long-term sustainability of the platform.

3.2 Feasibility Study

A **Feasibility Study** is an essential process for determining whether a project is viable, practical, and worth pursuing. For the **C2C Rental Kings Project**, which aims to build a peer-to-peer rental platform using Python, this study will analyze various aspects of the project, including **technical feasibility**, **economic feasibility**, **operational feasibility**, and **legal feasibility**.

This study helps assess the likelihood of success and identify any potential risks early on, guiding decisions about whether to proceed, modify, or halt the project.

1. Executive Summary

- Brief overview of the Rental Kings project.
- Objectives and goals of the project.
- Summary of findings from the feasibility study.

3.3 Requirement Gathering and analysis

Requirement gathering and analysis is a critical phase in the development of any project, especially for a complex platform like the C2C Rental Kings project. This phase involves collecting, defining, and analyzing the

requirements for the system, ensuring that the project aligns with user needs and business goals.

For the C2C Rental Kings platform, the goal is to develop a peer-to-peer rental system where individuals (owners) can rent their items to other individuals (renters). This platform will enable users to list their items, browse available items, make bookings, and process payments.

- **Functional Requirements**:
  - **User Registration and Login:** Users should be able to create accounts and log in securely.
  - **Search and Booking:** Users should be able to search for Product based on criteria.
  - **Payment Processing:** The system should support secure online payment methods
  - **Booking Management:** Users should be able to view, modify, or cancel their bookings.
  - **Customer Support:** Integration of a support system (e.g., chat, email) for customer inquiries.

CHAPTER - 4
PROPOSED SYSTEM

4.1 Scope

4.2 Project Modules Functionalities

- Users Can Get Suitable Products on Rent.
- To Know Updated Packages of Each Driving School.

➢ Scope Of Project:

- This System Provides Administrator A Panel to Manage Products, Reviews, Users, Manage Subdomains, Manage Comments, Etc.

- This Website Allows User to Upload Product, Manage Profile, Search Production Various Criteria, Review Products, Manage Bookings, Chat with Other Users, Etc.

- This Website Allows Admin and Normal Users Different Panels to Manage Their Respective Works.

➢ Advantages of proposed System:

Advantages:

- User Can Easily Find Products in Their Areas.
- Products And Price.
- User Can See Notification Like Product Info.
- User Can Review to Different Products.
- Admin And User Have to Compulsory Submitted Their Id Proof for Verification.

4.1 Scope

- This System Provides Administrator A Panel to Manage Products, Reviews, Users, Manage Subdomains, Manage Comments, Etc.

- This Website Allows User to Upload Product, Manage Profile, Search Production Various Criteria, Review Products, Manage Bookings, Chat With other Users, Etc.

- This Website Allows Admin and Normal Users Different Panels To Manage Their Respective Works.

4.2 Project Modules Functionalities

1. User Management Module

- **User Registration**:
  - Allow users to create accounts by providing personal information (name, email, phone number, etc.).

- **User Login/Logout**:
  - Enable secure login and logout functionality.

- **Profile Management**:
  - Allow users to view and update their profile information, including contact details and payment methods.

2. Product Management Module

- **Product Listing**:
  - Admins can add, update, or remove vehicles from the inventory.

- **Product Details**:
  - Display detailed information about each product, including model, pricing, and images.

- **Product Categorization**:
  - Allow categorization of product (e.g., luxury) for easier searching.

3. Booking Management Module

- **Search Functionality**:
  - Allow users to search for available Product based on criteria such as location, rental dates, and product type.

- **Booking Process**:
  - Enable users to select a product, choose rental dates, and confirm bookings.

- **Booking Confirmation**:
  - Send confirmation Message to users upon successful booking.

- **Booking Modification/Cancellation**:
  - Allow users to modify or cancel their bookings within specified terms and conditions.

5. Customer Support Module

- **Reviews**:
  - Allow users to leave reviews about their rental experience.

- **Live Chat Support**:
  - Implement a live chat feature for real-time assistance.

6. Admin Dashboard Module

- **User Management**:
  - Admins can manage user accounts, including viewing user activity.

CHAPTER - 5

Createddt	Datetime		It Contains Values of Created Date
Userid	Int(11)		It Contains Id of User

8.Product:

Filed Name	Datatype/Size	Constraints	Description
Productid	Int(11)	Primary Key	It Contains Id of Product
Categoryid	Int(50)		It Contains Id of Categoryid
Subcategoryid	Int(11)		It Contains Id of Subcategory
Userid	Int(50)		It Contains Id of User
Addeddt	Datetime		It Contains Value of Admin
Leastprice	Int(50)		It Contains Value of Least Price
Highestprice	Int(50)		It Contains Value of Highest Price
Status	Tinyint(4)		It Contains Value of Status

9.Rating

Filed Name	Datatype/Size	Constraints	Description
Ratingid	Int(11)	Primary Key	It Contains Id of Rating
Productid	Int(11)		It Contains Id of Productid
Createddt	Datetime		It Contains Values of Created Date
Userid	Int(11)		It Contains Id of User
Rating	Int(11)		It Contains Value of Rating
Status	Tinyint(4)		It Contains Value of Status

10.State:

Filed Name	Datatype/Size	Constraints	Description
Stateid	Int(11)	Primary Key	It Contains Id of State
Statename	Int(11)		It Contains Value of State
Status	Tinyint(4)		It Contains Value of Status

11.Subcategory:

Filed Name	Datatype/Size	Constraints	Description
Subcategoryid	Int(11)	Primary Key	It Contains Id of Subcategory
Categoryid	Int(11)		It Contains Id of Category
Createddt	Datetime		It Contains Values of Created Date
Addedbyadminid	Int(11)		It Contains Id of Admin
Subcategoryname	TextField		It Contains Value of Subcategory
Status	Tinyint(4)		It Contains Value of Status

12.User:

Filed Name	Datatype/Size	Constraints	Description
Userid	Int(11)	Primary Key	It Contains Id of Subcategory
Username	TextField		It Contains Value of Username

Password	TextField		It Contains Values of Password
Gender	TextField		It Contains Values of Gender
Email	TextField		It Contains Value of Email
Contactno	Int(10)		It Contains Value of Contactno
Cityid	Int(11)		It Contains Id of City
Registrationdt	Datetime		It Contains Value of Registration Date

13.Wishlist:

Filed Name	Datatype/Size	Constraints	Description
Wishlistid	Int(11)	Primary Key	It Contains Id of Wishlist
Productid	Int(11)		It Contains Id of Product
Userid	Int(11)		It Contains Id of User

14. tblnotification:

Filed Name	Datatype/Size	Constraints	Description
notificationid	Int(11)	Primary Key	It Contains Id of notifications.
productid	Int(11)		It Contains Id of product.
message	TextField		It Contains Values of messages.
Userid	Int(11)		It Contains Id of User
createDt	DateTime		It Contains Value of date and time

CHAPTER - 7
SOFTWARE TESTING

7.1 Unit Testing

7.2 Integration Testing

7.3 System Testing

Software testing is a crucial part of the software development lifecycle, ensuring that the application behaves as expected and meets the requirements. For a project like "Rental Kings," which I assume is a rental management system, you would typically want to implement various types of testing, including unit testing, integration testing, and possibly end-to-end testing.

7.1 System Test

System testing is the phase in software testing where the complete and integrated software system is tested as a whole to ensure that it meets the specified requirements. It aims to verify that the entire system works as expected, interacting correctly with all components and fulfilling user needs.

In the **C2C Rental Kings** project, system testing will validate the end-to-end functionality of the application, covering all features and workflows from start to finish. This includes user registration, item listing, booking, payment processing, user authentication, and more.

Admin Login Module:

Test Case No.	Input	Expected Output	Actual Output	Test Result
1.	Username=”admin” Password=”admin”	Login is successful	UserName is invalid.	Fail
2.	Username=”admin” Password=”Admin”	Login is successful	Password is invalid.	Fail
3.	Email=”admin” Password=”Admin”	Password is invalid.	Password is invalid.	Pass
4.	Email=”admin” Password=”admin”	Login is successful	Login is successful	Pass

Test Case No.	Input	Expected Output	Actual Output	Test Result
1.	User Name=”Tisa” Password=”Tisa” ConfirmPassword=”Tisa” Email=”tisa@gmail.com” Phone no=”8866510090” Address=”vesu” State=”Gujarat” City=”Surat” Gender=”Female” Profile Pic=”tisa.jpg”	Register successfully	Register successfully	Pass

	Gender=””	Textbox border should be changed to red.	Textbox border should be changed to red.	Pass
	Profile Pic=””	Textbox border should be changed to red.	Textbox border should be changed to red.	Pass

		Textbox border should be changed to red. Textbox border should be changed to red. Textbox border should be changed to red. Textbox border should be changed to red.	Textbox border should be changed to red. Textbox border should be changed to red. Textbox border should be changed to red. Textbox border should be changed to red.	

7.2 Unit Test

Unit testing is a critical part of software development that helps ensure that individual components or functions of your system work as expected. In the **C2C Rental Kings** project, unit tests will be used to test specific functionalities of the platform, such as user registration, item listing, booking, payment processing, and more.

Below is a detailed approach to unit testing for the **C2C Rental Kings** project, using Python's **unit test** framework (a built-in module for testing) and **Django** (if using Django for the backend).

7.3 Integration Test

Integration testing is the process of testing the interaction between different components or modules of a system to ensure they work together as expected.

In the case of the **C2C Rental Kings** project, integration testing will involve verifying that various components of the platform , such as user authentication, item listings, bookings, and payments, function seamlessly when combined.

CHAPTER - 8

FUTURE SCOPE OF ENHANCEMENT

The future scope of enhancements for the "Rental Kings" project can be vast, depending on the current features. Below are several potential areas for enhancement, categorized into functional, technical, and user experience improvements.

1. Functional Enhancements

a. Searching

- **Feature:** Implement more advanced search options, such as filtering by amenities property type (e.g., clothes, decore).

b. Booking Management

- **Feature**: Allow users to manage their bookings, including the ability to modify or cancel reservations.

c. Payment Integration

- **Feature**: Integrate multiple payment gateways to provide users.

d. User Reviews and Ratings
